

Standard programme – High Performance Reamers

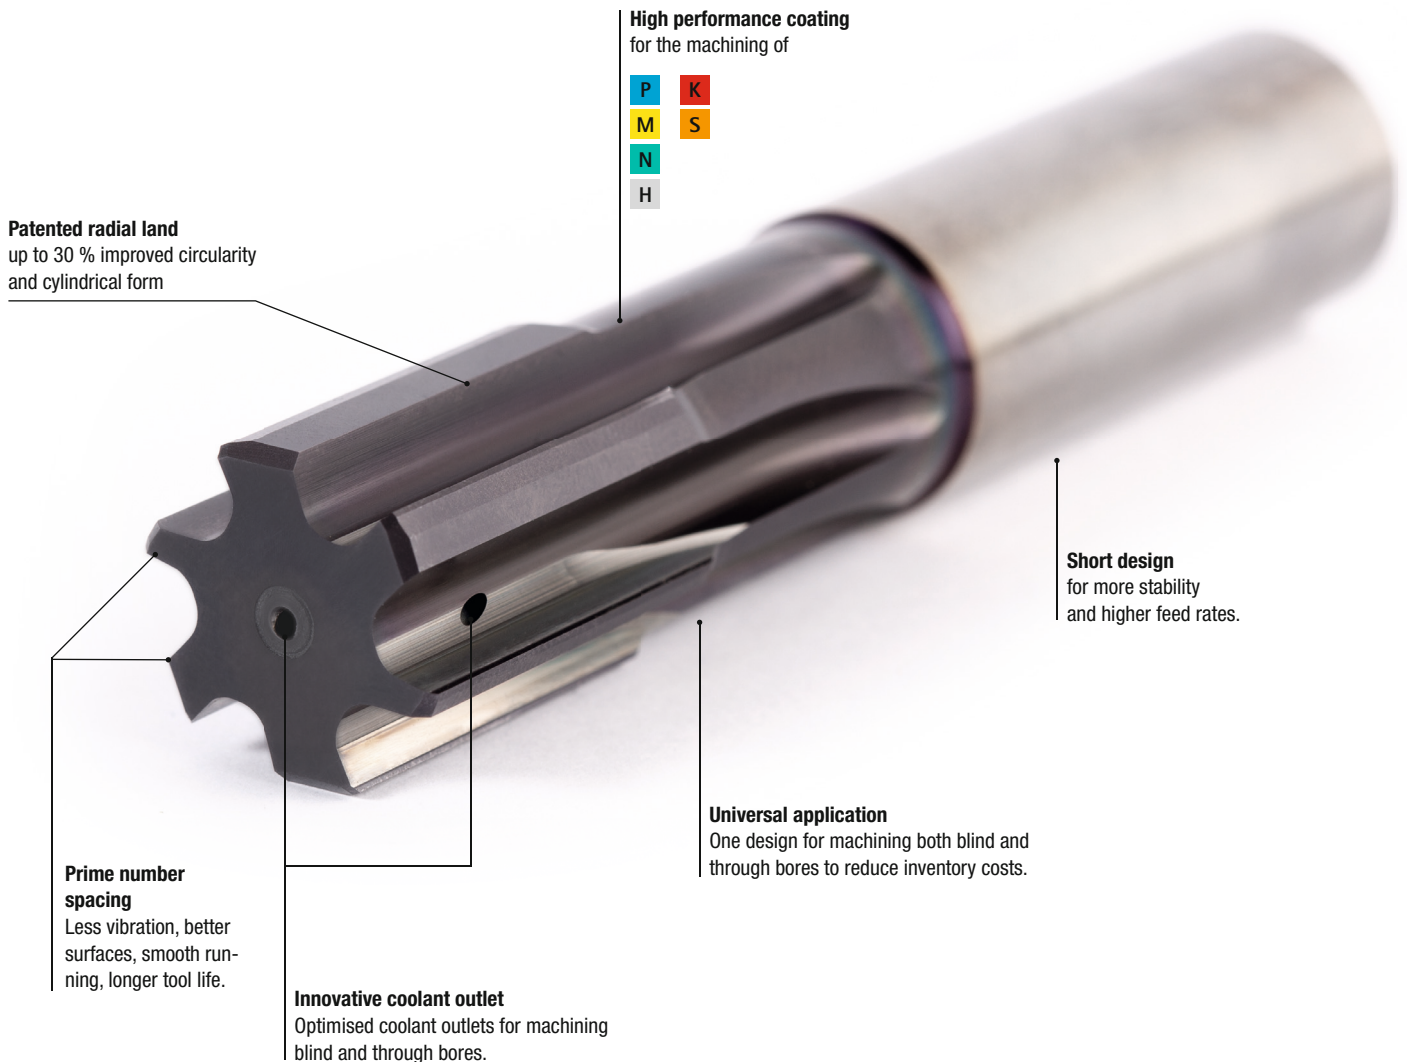

HNC Plus

**Tool life increased by up to
100 % as well as improved surfaces**

HNC Plus

New substrate, new coating, new geometry

With the new high performance reamer HNC Plus almost all workpiece materials can be machined in both through holes and blind holes with the same reamer.

This is made possible by the innovative design. The new reamer is also suitable for processing small to medium quantities. These universal, possible applications reduce inventory costs.

Additionally the short design saves carbide resources and the stability of the tool is improved. Tool life increases up to 100 % as a result of all these optimizations.

AT A GLANCE

- One reamer for blind and through bores
- Tool life increased by up to 100 %
- Low inventory costs due to universal application possibilities
- Short design increases stability and saves carbide resources
- Diameter range of 4.00 to 20.00 mm
- Perfectly suited for machining nearly all workpiece materials
- Patented radial land
